Green Skills getting ready for the Final meeting

WHAT IS NEXT?

Before the end of the project the consortium will present:

Combined Recommendations paper (REPORT ON What kind of training development is needed in partner countries' vocational curricula to embed green skills in the VET systems of partner countries.). Through this document, partner countries will have more similar green skills occupation descriptions and their vocational education system will get closer to each other because they will be coming from the same source

EDUCATION, AUDIOVISUAL &

HOW?

"When future is changing, our skills need to change, too."

"One of the key challenges for a better world is to secure a functional environment."

"Vocational education is to be adapted to meet green principles."

Adapting Green Skills to VET: Questionnaire Report

An online survey of educators and employers in three European countries identified that employers consider green skills to be relevant, important and needed in their workplaces. However, they do not consider that their staffs always have the relevant skills, and there is a mismatch between the green skills needed and the green skills actually being used.

Educators consider the broader area of green skills to be a developing area, within which they prioritise the field of environmental awareness. While employers also consider this to be an important area, they also have VET needs in the fields of expert procedural knowledge and practical involvement, suggesting there is a need (and an opportunity, as the delivery models develop) to more closely align the skills being taught by VET providers to those needed in the workplace.
